2. Course information

Units of credit:  6
Pre-requisite(s): CHEM2031
Teaching times and locations:
http://www.timetable.unsw.edu.au

2.1 Course summary

This course provides insight into the current state-of-art research where metals are used in technologies such as semiconductors, batteries, solar cells, superconductors, and where metals are used in life such as photochemical processes & nitrogen fixation.

2.2 Course aims

This course showcases the importance of understanding the role of the metals in life and technology. The key components of structural characterization relevant to this understanding are covered and the function derived from the structure expanded. The way chemistry can be used to tune structure and hence properties is shown to underpin all of these technologies and processes in life.

Learning outcomes (TLO mapping 1.1, 1.2, 1.3, 2.1.2, 2.1.3, 2.1.5, 2.1.6, 2.1.7, 3.2, 3.3, 3.4, 4.1, 4.2, 5.1, 5.2, 5.3)

Students are expected to:

Be able to describe a range of cutting edge characterisation methods used to analyse inorganic compounds and applying said knowledge to correctly identify compounds (1.1, 1.2, 1.3, 2.1.2, 2.1.3, 2.1.7, 3.3)

Display a comprehensive knowledge of the chemistry of solid state materials and how this applies to modern technologies (ranging from semiconductors to superconductors to solar cells) (1.3, 2.1.3, 2.1.5)

Understand and describe the reaction mechanisms that can occur in inorganic chemistry (2.1.5, 2.1.6)

Understand the function and molecular properties of bio-inorganic systems (1.2, 2.1.5, 2.1.6)

2.3 Course learning outcomes (CLO)

At the successful completion of this course you (the student) should be able to:
1. Describe a range of cutting edge characterisation methods used to analyse inorganic compounds and applying said knowledge to correctly identify compounds.

2. Display a comprehensive knowledge of the chemistry of solid state materials and how this applies to modern technologies (ranging from semiconductors to superconductors to solar cells).

3. Understand and describe the reaction mechanisms that can occur in inorganic chemistry.

4. Understand the function and molecular properties of bio-inorganic systems.

### 2.4 Relationship between course and program learning outcomes and assessments

### 3. Strategies and approaches to learning

#### 3.1 Learning and teaching activities

In this course we utilise lectures, seminar and laboratory-based teaching methods. The lectures will be pre-recorded with activities to do after each. We will then have engaging interactive workshops to help cement your learning from the lectures. Seminars will allow students to ask questions of industrial chemists, allowing them to gain insight into the chemistry profession (pending availability).
Laboratory activities by their very nature are interactive and hands-on, we also seek to make the most of students' time in laboratories by engaging in group work (including presentation of data and discussion activities). We also have laboratory practicals that involve students' having to conduct independent studies/research in order to solve complex tasks/problems, this will allow students to develop their critical analysis and problem-solving skills.

3.2 Expectations of students

Expectations of students, include:

- Watch the lecture material and complete activities set before workshop sessions
- Attend workshops and actively participate in the activities therein
- Be fully prepared for and attend laboratory sessions
- Complete all assignments by specified deadlines
- Engage in private study equal to the number of hours of face-to-face contact
4. Course schedule and structure

This course consists of 80 hours of class contact hours. You are expected to take an additional 80 hours of non-class contact hours to complete assessments, readings and exam preparation.

<td></td>
</tr>
</tbody>
</table>

**Important note:** To be awarded a pass in this subject, students must satisfy three conditions:

(i) An overall pass (≥ 50%) in the laboratory component, and
(ii) Satisfactory overall performance (≥ 35%) in the final examination, and
(iii) A minimum attendance of 80% in laboratories is required.

Failure to satisfy all criteria could result in either a FL or UF (Unsatisfactory Fail) grade being awarded, or further assessment being offered at the sole discretion of the course coordinator. Students must ensure their availability to attend any supplementary examination that will usually be offered in the week suggested by UNSW; inability or failure to attend a supplementary examination may lead to a FL or UF (Unsatisfactory Fail) grade being confirmed.

Further information

UNSW grading system: [https://student.unsw.edu.au/grades](https://student.unsw.edu.au/grades)

5.2 Assessment criteria and standards

Assessment criteria and associated rubrics for all assignments and laboratory practicals can be found on Moodle. Feedback for assignments will be provided on the associated rubric(s).
5.3 Submission of assessment tasks

All lab reports and assignments must be submitted by the due date and time via Moodle and may be subject to plagiarism checks. Late submissions will be accepted but carry a 10% penalty per day up to one week (7 days) late, after which a 100% penalty will then be applied (weekends and public holidays count in determining late penalties). The penalty is applied to the total for the assignment not to the mark obtained (i.e. you submit a report 2 days late but would have scored 70% if it was on-time, your mark will be adjusted to 50% given the 20% late penalty). Extensions of deadlines will only be granted via applications to the centralised special consideration unit (if eligible). This information is also available on Moodle.

5.4. Feedback on assessment

Lab reports and assignments will be graded using the associated rubrics on Moodle. Additional comments will also be given on the rubrics or reports to inform students where they can improve. All feedback will be given in a timely manner and we aim to have this occur within a week of submission.
6. Academic integrity, referencing and plagiarism

Referencing is a way of acknowledging the sources of information that you use to research your assignments. You need to provide a reference whenever you draw on someone else’s words, ideas or research. Not referencing other people's work can constitute plagiarism.

Further information about referencing styles can be located at https://student.unsw.edu.au/referencing

Academic integrity is fundamental to success at university. Academic integrity can be defined as a commitment to six fundamental values in academic pursuits: honesty, trust, fairness, respect, responsibility and courage. At UNSW, this means that your work must be your own, and others’ ideas should be appropriately acknowledged. If you don’t follow these rules, plagiarism may be detected in your work.

Further information about academic integrity and plagiarism can be located at:

- The Current Students site https://student.unsw.edu.au/plagiarism, and
- The ELISE training site http://subjectguides.library.unsw.edu.au/elise/presentation

The Conduct and Integrity Unit provides further resources to assist you to understand your conduct obligations as a student: https://student.unsw.edu.au/conduct.

7. Readings and resources

Inorganic Chemistry 5th Edition, CE Housecroft and AG Sharpe, 2018

8. Administrative matters

Course contact: Dr. Scott A Sulway (s.sulway@unsw.edu.au)
